

# ngClass

# ngClass

- ngClass is a directive in Angular that allows you to dynamically set CSS classes on an HTML element based on the data in your component.

```
<div [ngClass]="['negativo', 'off']"></div>
```

```
arrayClasses = ['negativo', 'si']
```

```
<div [ngClass]="arrayClasses"></div>
```

# ngClass

- Conditionally apply styles to elements based on the state of your application.

```
<div [ngClass]="{'class1': condition1, 'class2': condition2}"></div>
```

```
<li [ngClass]="{positivo: cantidad > 0, negativo: cantidad < 0}">Línea</li>
```
